Seasoned Software Engineer with a track record of delivering high-impact native and cross-platform applications for millions of users. Pairing deep mobile expertise with cutting-edge tooling and full-stack design skills to accelerate end-to-end delivery.

Experience

Recess Technologies **Denver, Colorado**

Principal Engineer *June 2025—Present*

- Spearheading full-stack development and deployment of a cross-platform web and mobile application using Expo for React Native.
- Driving adoption of AI-powered engineering tools utilizing specialized agents to accelerate engineering velocity.
- Establishing technical standards, engineering workflows, and CI/CD pipelines and providing guidance to a growing engineering team.

VML Enterprise Solutions **Denver, Colorado**

React Native Developer *August 2023—August 2024*

- Collaborated with a globally distributed team on the initial build of Berkshire Hathaway Energy's mobile platform.
- Curated a highly reusable codebase designed for use across four distinct Berkshire Hathaway affiliates for both iOS and Android.
- Integrated RESTful APIs and worked closely with the client's backend team to resolve inconsistencies.
- Rapidly delivered critical features by leveraging deep iOS expertise to accelerate React Native proficiency and ship on schedule.

iOS Developer *May 2021—August 2023*

- Spearheaded UI/Accessibility improvements for the ConEdison iOS app serving 3.6M customers including New York City.
- Introduced Dynamic Type, accessible color palettes, enhanced VoiceOver behavior to improve the experience for all users.
- Guided team on subsequent feature implementations to ensure standards were upheld and helped maintain a 4.8 App Store rating.
- Improved error messaging and form validation for account management, outage reporting, and payment flows of the ConEdison app.
- Organized presentations and demonstrated updated application features to client team and internal stakeholders.
- Worked closely with backend team to seamlessly integrate a new RESTful API into the existing ConEdison iOS application codebase.
- Facilitated communication with product stakeholders to report and resolve bugs, performance issues, and design inconsistencies.

iOS and tvOS Developer *June 2020—May 2021*

- Drove core greenfield development for of the iOS and tvOS applications for *March Madness Live*, taking technical ownership during critical phases of the project to maintain velocity and deliver the apps in under a year for the 2021 NCAA basketball tournament.
- Identified and resolved conflicts between client expectations and technical implementation, preserving project scope and timeline.
- Integrated a GraphQL API by utilizing Apple's Combine framework to ensure fast, efficient data flow and real-time updates for *March Madness Live*, helped sustain a 4.7 App Store rating with over half a million reviews.
- Onboarded and mentored new team members, taking ownership of coordination to accelerate ramp-up time for new developers.

Associate iOS and tvOS Developer *August 2018—June 2020*

- Developed and maintained features for the official iOS app of the National Basketball Association.
- Took ownership of application Chromecast and AirPlay features, improving user experience and managing external dependencies.
- Reduced app crashes by approximately 40 percent using analytics and device log data to identify and fix issues.
- Implemented user analytics and leveraged data to drive increased engagement, monetization, and overall app performance.
- Eliminated over 64,000 lines of code by removing unused frameworks and files, resulting in improved build and launch times, reduced app size, and enhanced maintainability.

Intern iOS Developer *May 2018—August 2018*

- Joined the iOS and tvOS engineering team for the NBA app, gaining insight into the mobile application engineering and delivery life cycle while cultivating strong code review skills through constructive feedback.

Technical Skills

Languages - TypeScript, Swift, JavaScript, Python, Objective-C, Ruby
Networking - REST, GraphQL, WebSockets, OpenAPI, URLSession, Axios, URLCache
Backend - Supabase, FastAPI, Flask, Deno
Databases and Storage - PostgreSQL, Redis, SQLite, CoreData, SwiftData, AsyncStorage, UserDefaults, NSCache, FileManager, Codable
State Management - Redux, Zustand, LegendState, TanStack Query
Testing - Jest, Vitest, RN Testing Library, Playwright, Cypress, Maestro, Detox, XCTest, XCUITest, MSW, k6, pgTAP
Security - OAuth, JWT, Row-Level Security, CryptoKit, LocalAuthentication, Keychain Services, expo-secure-store, Apple Security
Accessibility and Localization - Dynamic Type, VoiceOver, WCAG Compliance, String Catalogs, HIG Compliance
Web UI - React, Vite, Next.js, Svelte, Tailwind CSS, React Router
Mobile UI - UIKit, SwiftUI, Auto Layout, CoreAnimation, Reanimated, WidgetKit, NativeWind, Expo Router, React Navigation
Mobile APIs - AVFoundation, UserNotifications, PushKit, CoreLocation, MapKit, HealthKit, CoreBluetooth, BackgroundTasks, Combine, Swift Concurrency, AirPlay, Expo SDK
Mobile Runtime - JSI, Fabric, Turbo Modules, Native Modules, Hermes
Observability - Sentry, DataDog, LogRocket, Crashlytics, Grafana, os_log
DevOps and Distribution - GitHub Actions, EAS Build, Fastlane, Docker, TestFlight
Developer Tools - Neovim, Xcode, VSCode, Cursor, Android Studio, Postman, Figma, SwiftLint, ESLint, Mermaid, Storybook
AI and Agentic - Claude Code, Copilot, OpenCode, Ollama, Model Context Protocol, Agent Skills, RAG, Embeddings
Cloud Services - EAS, Vercel, Cloudflare, Firebase, Google Cloud Platform, AWS — S3, CloudFront, EC2, Amplify

Projects

Web Application for Independent Film | *JavaScript, HTML, CSS* **December 2020**

- Developed a static web app that was central to the narrative of the 2022 film *The Immaculate Room*.

Education

Colorado School of Mines — *Bachelor of Science in Computer Science* *Golden, Colorado*
